SANDEEP VARMA LVS

Frontend Engineer — React.js | Next.js | TypeScript

sandeeplakham@gmail.com | +91 7901003266 | Bengaluru, India | Portfolio | GitHub

PROFILE SUMMARY

Frontend Engineer with 4+ years building scalable React, Next.js, and TypeScript applications. Led architecture, CI/CD, and cloud (AWS S3, RBAC) decisions on production systems, with hands-on use of AI-assisted development tools to accelerate delivery.

SKILLS

Frontend: *React.js, Next.js, Redux Toolkit, Redux Thunks, Context API, RTK Query, HTML5, CSS3, Tailwind CSS, Bootstrap, MUI*

Cloud & DevOps: *AWS S3, CI/CD, Vite, Role-Based Access Control (RBAC), GCP*

Backend & Data: *Node.js, Express.js, GraphQL, MySQL*

Languages & Tools: *JavaScript, TypeScript, Python, Git, AI-Assisted Development (Copilot / Claude-style tooling), Jest, Mocha*

WORK EXPERIENCE

Frontend Engineer | Expedium *07/2024 – Present*

- Led a team of 5 engineers building core EHR platform modules (Appointments, Visit Notes, Patient Chart, Demographics) in React and Redux, taking ownership of the modules and driving architecture decisions and code reviews.
- Led migration from CRA to Vite and implemented CI/CD pipelines — cutting local dev server startup time by **roughly 50%** and pipeline build time by **around 30%**.
- Configured AWS S3 for secure storage and retrieval of patient documents and exported reports, integrating it with the platform's PDF/CSV export engine.
- Implemented role-based access control (RBAC) across EHR modules so clinicians and staff access only the data appropriate to their role, supporting healthcare data-compliance requirements.
- Architected hardware-software bridges by integrating Dynamsoft Web TWAIN (DWT), enabling direct multi-page document scanning and managing real-time device state for connectivity, printer status, and scanning progress.
- Automated medical labeling via the DYMO Label SDK, and used AI-assisted development tools throughout the workflow to speed up debugging, code review, and boilerplate generation.

Frontend Engineer | Global Software Technologies *06/2023 – 07/2024*

- Owned end-to-end integration of three payment gateways (Stripe, Razorpay, PhonePe), architecting secure transactional workflows from design through production rollout.
- Led migration of the e-commerce application from React (CRA) to Next.js, implementing SSR — improving organic search traffic by **around 20%** and cutting page load time by **roughly 25%**.
- Built analytics dashboards surfacing core business metrics to support operational decision-making.

Software Engineer | The 10xAcademy *01/2022 – 03/2023*

- Independently engineered an automated grading system for React assignments using Jest and Mocha, executing real-time test cases and delivering instant feedback to students.
- Migrated marketing sites from PHP to Express.js, implementing server-side rendering and CI/CD deployment workflows — cutting average page load time by **around 30%** and improving organic search rankings.
- Used AWS S3 for storing and serving static assets and student submission files across GCP-hosted applications.
- Implemented role-based access control (RBAC) for the student portal, separating student, instructor, and admin permissions.
- Architected scalable features for the student portal using Next.js and Go, leveraging GraphQL for efficient data fetching, and managed three high-traffic marketing sites for high availability and seamless user acquisition.

PROJECTS

AI Code Review Assistant

- Built a tool that uses AI to generate structured feedback on code quality, analyzing style, logic, and potential bugs to speed up PR review.

MIPS Learning Tool

- AI-based interactive system that simplifies assembly language concepts for learners through guided explanations.

Git Diff Analyzer

- AI-powered tool that summarizes code changes from git diffs into human-readable, contextual insights to help teams review PRs faster.

EDUCATION

10x Academy — Full Stack Software Engineering Bootcamp

B.Tech, Mechanical Engineering — CGPA: 7.94
